SUMMARY

B.E. Computer Science and Engineering (AI & ML) student with hands-on experience building AI and GenAI applications using Python and JavaScript. Experienced in developing practical AI solutions involving LLMs, retrieval-augmented generation (RAG), document processing, prompt engineering, evaluation pipelines, and automation-oriented workflows. Strong interest in turning real-world problems into working prototypes, testing solutions, debugging systems, and iterating toward reliable outcomes.

TECHNICAL SKILLS

Programming: Python, JavaScript, SQL

AI & GenAI: Generative AI, LLMs, RAG, Prompt Engineering, AI Agents, Conversational AI

AI Systems: Document Intelligence, Document Processing, Evaluation Pipelines, AI Automation

Web & APIs: React.js, REST APIs, Node.js

Core: Data Structures and Algorithms, Problem Solving, Data Processing, System Debugging

PROJECTS

NeuroFlow AI – Agentic Document Intelligence System

Python, JavaScript, LLM, RAG

- Designed an AI-driven document intelligence system to process documents and generate relevant, cited, and evaluated results.
- Developed a multi-stage AI workflow combining planning, retrieval, task execution, response generation, and evaluation for document-based tasks.
- Implemented document ingestion and processing workflows for structured and unstructured inputs, supporting downstream AI analysis.
- Applied RAG concepts to retrieve relevant document information before generating responses, reducing reliance on unsupported model-generated content.
- Designed the system as a practical web application prototype for automating document search, analysis, summarization, comparison, and question answering.

AI Virtual Interview System

Python, LLM, Prompt Engineering

- Built an AI-powered mock interview platform that uses LLM-based logic to simulate interview interactions and evaluate candidate responses.
- Designed prompt and evaluation logic to analyze responses against role expectations and identify specific performance gaps.
- Developed structured feedback generation for interview readiness, communication quality, and response strength.
- Iteratively tested and debugged the evaluation workflow to improve consistency and usefulness of generated feedback.

HealthLens AI

Python, RAG, Document Processing

- Developed an AI-based document analysis system that processes medical reports, PDFs, images, and other uploaded documents.
- Built preprocessing and analysis workflows to extract relevant information from unstructured documents for downstream AI processing.
- Implemented an AI-assisted risk classification workflow producing Normal, Medium, and High-Risk categories.
- Debugged document-processing edge cases across different input formats to improve pipeline reliability.

EDUCATION

Methodist College of Engineering and Technology (MCET)

2023 – 2027

B.E. in Computer Science and Engineering (AI & ML)

CGPA: 7.69

Sri Suryodaya Junior College

2021 – 2023

Intermediate (MPC)

55%

Zila Parishad High School, Pusapatirega

2021

Class X

95%
